

Ahmad Beni Rusli

MACHINE LEARNING ENGINEER | FULL-STACK DEVELOPER | WAREHOUSE MANAGER

Cilacap, Indonesia | +62 882-1601-8165 | ahmadbenirusli@gmail.com | LinkedIn /ahmad-beni-rusli-052684371 | GitHub /ahmdbnrsl

01 / PROFESSIONAL PROFILE

Information Systems undergraduate and research-oriented engineer working across machine learning, full-stack development, agricultural technology, and operational management.

I combine independent research with end-to-end software development and hands-on operational responsibility. My work includes Eyealyze, a completed independent low-data computer vision research project; an active 3D leaf disease research project for Jambu Citra; warehouse inventory management and bookkeeping at Gudang DPK; and a production monitoring system for El Bayan 2 supporting approximately 90 students and caregivers across three boarding-school locations. My involvement in agricultural environments informs a practical approach to building systems that connect data, software, and field operations.

02 / CORE EXPERTISE

MACHINE LEARNING & RESEARCH	SOFTWARE & INFORMATION SYSTEMS	OPERATIONS & FIELD MANAGEMENT
Computer vision	Next.js / React / TypeScript	Inventory and stock control
Low-data learning	Python / FastAPI / Go / Fiber	Receiving / dispatch / reconciliation
Representation learning	PostgreSQL / Prisma	Bookkeeping and operational records
3D vision / reconstruction	Authentication / realtime systems	Supplier / invoice coordination
ONNX / model deployment	Face recognition / geolocation integration	Agricultural field operations
Research evaluation / benchmarking	System architecture / deployment	SOP and process improvement

03 / PROFESSIONAL & INDEPENDENT EXPERIENCE

Warehouse Inventory & Bookkeeping Manager 10 DEC 2025 - PRESENT
Gudang DPK | Cilacap, Central Java, Indonesia

Manage end-to-end warehouse operations as the sole responsible operator, covering receiving, storage, stock movement, dispatch, stock reconciliation, and routine stock checks across cigarettes, staple goods, bottled water, and other inventory.

Maintain bookkeeping and operational records, including invoices, cash records, supplier coordination, stock movement documentation, and routine reporting.

Coordinate daily inventory administration and ensure physical stock, transaction records, and outgoing goods remain consistently traceable.

Solo Full-Stack Developer 2024 - 2025
Sistem Monitoring Pertanian dan Pesantren | El Bayan 2

Designed and deployed a production Next.js information system supporting approximately 90 students and caregivers distributed across three boarding-school locations.

Implemented face-recognition attendance, location detection, student scheduling, activity management, and an administrative dashboard for day-to-day monitoring.

Owned the system end-to-end as a solo developer, from workflow analysis and architecture through implementation, deployment, and maintenance.

<i>Eyanalyze</i>	ML / RESEARCH
Independent low-data computer vision research platform combining DINOv3 ViT-B/16, DINOv3 ConvNeXt Base, and MobileNetV3-Large through dynamic score-level late fusion, with ONNX Runtime inference, PostgreSQL/pgvector retrieval, and ViT attention visualization. <i>28 APR - 28 AUG 2026 / Completed. Evaluated weight sensitivity, exact versus HNSW vector-search scalability, latency, throughput, batch efficiency, and system resource utilization; preprint manuscript prepared but not yet submitted.</i>	
<i>3D Leaf Disease Research - Jambu Citra</i>	RESEARCH / 3D
Active independent research on evidence-based multi-label disease recognition from smartphone RGB video, structured around 3D reconstruction, local surface regions, phenotype discovery, expert annotation, dataset versioning, training, and video-based inference. <i>Started 06 SEP 2026 / Current implementation covers the system foundation and sample-acquisition / researcher-QC workflow; the 3D reconstruction and downstream research pipeline remain under active development.</i>	
<i>Sistem Monitoring Pertanian dan Pesantren</i>	SOFTWARE / FIELD
Production information system developed independently for El Bayan 2, supporting approximately 90 students and caregivers across three boarding-school locations through a unified monitoring workflow. <i>Next.js / Face-recognition attendance / Location detection / Student scheduling / Activity management / Administrative dashboard / Solo development, 2024 - 2025.</i>	

05 / TECHNICAL TOOLKIT

ML / DATA	Python, PyTorch, Transformers, scikit-learn, ONNX Runtime, OpenCV, NumPy, pandas, pgvector
WEB / BACKEND	TypeScript, Next.js, React, Node.js, FastAPI, Go / Fiber, REST APIs, PostgreSQL, Prisma, MongoDB
INFRASTRUCTURE	Docker, Docker Compose, Git, GitHub, Redis Streams, Google Drive API, Cloudflare Tunnel, Vercel, Render
OPERATIONS	Inventory administration, receiving / dispatch, stock reconciliation, bookkeeping, invoices & cash records, supplier coordination, stock checks, operational reporting

06 / EDUCATION

Bachelor of Information Systems (S1) <i>Universitas Komputama / Cilacap, Central Java, Indonesia</i>	<i>2024 - 2028 (EXPECTED)</i> <i>GPA 3.55 / 4.00</i>
--	---

07 / LANGUAGES

Indonesian - Native / English - Working Proficiency

08 / RESEARCH INTERESTS

Computer vision / Low-data learning / 3D vision / Agricultural AI / Evidence-based machine learning / Information systems

09 / ADDITIONAL INFORMATION

Information Systems undergraduate with direct involvement in agricultural environments, using field exposure to inform research questions and the design of practical software and machine-learning systems.
